

Alexander West

980-229-6024 | alexander.steven.west@gmail.com | [linkedin.com/in/awest25](https://www.linkedin.com/in/awest25) | github.com/awest25

EDUCATION

University of California, Los Angeles (UCLA)
Bachelor of Science in Computer Science, GPA: 3.70

Graduated June 2025
Los Angeles, CA

TECHNICAL SKILLS

Languages: TypeScript, Python, C/C++, SQL, JavaScript, Scala, Bash
Frameworks & Tools: React, Next.js, Node.js, Docker, Kubernetes, Helm, Terraform, Prometheus, Grafana
Cloud & Data: AWS (EKS), Google Cloud, Apache Kafka, Apache Spark, Confluent, Avro, PostgreSQL, Redis

EXPERIENCE

- | | |
|--|--|
| Software Engineer, Data Platform
<i>Viasat, Inc.</i> | Jun 2025 – Present
<i>San Francisco, CA</i> |
| <ul style="list-style-type: none">• Architected a cloud-agnostic Kubernetes operator in Python, automating Kafka topic lifecycle via a declarative CRD API across AWS EKS and GCP with drift detection and immutable field protection• Engineered an async Python sidecar that injects Kafka topic metadata as Prometheus labels on every Kafka Connect metric, enabling per-topic observability across 7 environments without touching connector code• Reduced platform support load by 30% by building a Slack AI agent on Claude and Gemini with a quality review pass enforcing source citations and doc-grounded recommendations• Automated Grafana dashboard deployment across 8 environments by upgrading to v13 and configuring native Git Sync, replacing a manual per-environment update process with a single commit• Drove an engineering-wide AI adoption initiative co-designing a centralized MCP registry and usage analytics; presented the MCP protocol to 500 Viasat engineers at an internal conference• Provisioned 3 new production environments (EU, Australia, M3) for the Kafka platform via Terraform and Helm, growing deployment footprint from 4 to 8 environments across GKE and EKS clusters | |
| Software Engineer Intern
<i>Moebius Solutions, Inc.</i> | Jun 2024 – Aug 2024
<i>San Diego, CA</i> |
| <ul style="list-style-type: none">• Built a customizable table library in TypeScript and React including column drag-and-drop rearranging and resizing, supporting it with a comprehensive API and usage guide to streamline integration• Reduced app-wide loading time by 2x by auditing the React component tree for excessive DOM manipulations and re-architecting data-intensive components with targeted memoization• Refactored a real-time data pipeline in a React-based mapping application, enabling users to select and track live geolocation points on a map with continuous updates from a server-side data stream via WebSockets | |
| Software Engineering Intern
<i>Code On Time LLC</i> | Jun 2023 – Dec 2023
<i>San Diego, CA</i> |
| <ul style="list-style-type: none">• Designed and built a React.js application integrating a RESTful API and OAuth with an interface customized for specific workflows, enhancing system scalability by 250% through improved API consumption• Produced a Python tool to interact with the application's RESTful API using a large language model; successfully answered 80% of simple user questions utilizing recursive API traversal | |
| Software Development Team Lead & Consultant
<i>Bruin Sports Analytics, Tennis Consulting Team</i> | Oct 2023 – Jun 2025
<i>Los Angeles, CA</i> |
| <ul style="list-style-type: none">• Led a 6-person software development and data analysis team, spearheading development of a Next.js-based match playback tool with point-level data filterable by shot attributes. Demo: match-manager-xi.vercel.app• Conducted client-facing presentations with UCLA Tennis coaches and players, delivering match summaries tailored to player-specific needs using Tableau, backed up with match footage from the custom application | |
| Research Intern, Machine Learning and Data Systems
<i>UCLA Bionics Lab</i> | May 2024 – Sep 2025
<i>Los Angeles, CA</i> |
| <ul style="list-style-type: none">• Designed and optimized a predictive model using CNN and LSTM neural networks, fine-tuning hyperparameters to improve grip test predictions from 80% to 98% accuracy• Created a UDP data handler to capture and log real-time hardware sensor data from 19 sources, using multithreading to synchronize it with a multi-camera video recording pipeline in OpenCV for computer vision | |
